KELSEY'S HARDY AMERICAN PLANTS

and Carolina Mountain Flowers

Showing beds of Rhododendron maximum at Highlands Nursery

Nearly 100,000 plants in this block alone of Rhododendron maximum, R. catawbiense and Kalmia latifolia, partly under shades of lath and Rhododendron branches. Abies fraseri in the background.

A Rare and Beautiful Hardy Carolina Mountain Shrub

Stuartia pentagyna

THIS, the so-called American Camellia, is one of the most beautiful of all North American shrubs as well as one of the most rare, and has been much sought after for many years, being sparingly offered at times by a very few nurserymen in America and Europe.

Highlands Nursery has disseminated it quite largely, and we beg to announce that we now have a splendid stock on hand for the first time in years, which is offered below.

Stuartia pentagyna is the only American representative of the Tea and Camellia family which can be grown in the latitude of New England, and a few very fine clumps are now growing in the vicinity of Boston. It is an erect shrub, ten or twelve feet high, well foliaged and with large axillary flowers three or four inches across, with white creamy petals, deeply crenulated on the margins and resembling those of some of the single Camellias. Altogether it is one of the finest of all shrubs for single or mass planting and thrives in damp situations as well as in drier garden soil.

Orders should be placed at once for fall shipments, and stock will be reserved.

This is an exceptional opportunity for nurserymen to stock up and for Park and Cemetery officials to secure a supply of this rare and beautiful shrub

Rhododendron maximum American Rose Bay

AND

Kalmia latifolia Mountain Laurel

Showing Rhododendron maximum supplied by me growing at "Greystone," Yonkers, N. Y., the estate of Samuel Untermyer, Esq. Out of thirty carloads collected and shipped by us to this estate last spring, there was practically no loss. Photograph taken September, 1901, about four months after planting.

The use of collected Rhododendrons and Kalmias for quickly and permanently producing fine landscape effects is now well established, and with any reasonable expenditure there is no other possible way to obtain the results to be had by the use of these magnificent hardy broad-leaved evergreens. We have been in the business of collecting and growing Rhododendrons, Kalmias, Azaleas and other hardy American plants for sixteen years, and our sources of supply are not only unexcelled but the long experience of our employees renders a commission placed in our hands peculiarly safe.

Our supply and advantages being unlimited, we are prepared to accept orders for fall or spring delivery, with an assurance of prompt service and satisfactory material that

must give good results.

In carload lots we collect sizes from 2 feet to 10 feet in height with corresponding diameter; the number to the car, say forty or fifty to three or four hundred, depends entirely on the size. We are glad to give prices and all information possible to prospective purchasers, and specially invite correspondence on the subject from Landscape Architects, Park Superintendents and Boards and Estates.

Leucothoë catesbæi, Galax aphylla, and the rare Rhododendron catawbiense from the Carolina mountains we also collect by the carload, but the peculiar conditions of distance from railroads to plant statiors, and rather heavy freight rates, make their use more limited to the producing of finer finished effects in connection with Rhododendron maximum and Kalmia latifolia, or with other planting. The foliage effects of these broadleaved evergreens is beyond comparison, the leaves being rich in color, and excepting Rhododendron catawbiense turning brilliant bronze tints in fall and winter. Full information for the asking.

HARLAN P. KELSEY

Tremont Building, Boston, Mass.

IMPORTANT Read Before

My Hardy Stock is shipped direct from Highlands Nursery, in the western North Carolina mountains, from Pineola, N. C., freight station. The present freight rate to New York, Boston and Philadelphia is 961/2 cts. per 100 pounds. Special express rates, connecting with Norfolk steamers.

I claim superior packing, my export shipments reaching the most remote

countries in perfect condition. Packing charged for at cost.

Foreign Remittances should be sent by International Postal Money Order, drawn on Boston, Mass., Post Office, or by New York or Boston Exchange. An American dollar is equal to a little more than four (4) English shillings, four (4) German marks, or (5) francs.

Our Foreign Correspondents are notified that we use the Western Union

and A. B. C. Telegraph and Cable Codes and Adams Cable Codex.

Claims must be made immediately on receipt of goods. All shipments travel at consignee's risk. Shipping begins about September 15 and lasts till December, and in spring from March 1 to May 15. Give shipping instructions unless you wish to leave it to me. I use best judgment but assume no risk.

Growing Rhododendrons, Azaleas, Kalmias, Hemlocks and plants of this class in wholesale quantities will continue to be my specialty. All the leading Parks, Cemeteries and Nurseries of America as well as those abroad, have been satisfactorily supplied in the past with many hundreds of thousands of plants from Highlands Nursery.

Correspondence with all Parks, Cemeteries, Nurseries and Botanical Gar-

dens in America or abroad especially solicited.

This Catalogue cancels all previous quotations.

COLLECTED PLANTS

Nearly all plants offered in this Catalogue are heavy, nursery-grown, but can usually

be supplied in strong collected stock, when desired.

My facilities are unapproached elsewhere for collecting the best stock at a low cost, and an experience of 15 years and well-trained collectors enable me to assure buyers that orders for "collected" plants will receive the same attention and care as though I intended planting the stock myself. As a rule, however, I do not recommend the extensive use of collected stock and cannot guarantee it in any instance.

Rhododendrons, Kalmias, Leucothoë catesbaei, Galax aphylla, and other broad-leaved evergreen shrubs and ground-covering plants are collected by the carload for use in producing immediate effects by massing. This subject requires special correspondence. See first page for special advertisement.

Do You Want Hardy Stock?

The location of HIGHLANDS NURSERY, at the summit of the Blue Ridge, in western North Carolina, 3 800 feet among the clouds, and under the shadow of the great Grandfather mountain (the highest peak in the Blue Ridge range) insures long, cool summers and cold winters, which are very favorable to the growth of these beautiful native ornamentals, producing a perfectly hardy stock—a most important point with northern planters. The thermometer often reaches an extreme of 10° to 15° below, and every few years will go as low as 20° or more below zero.

The Azaleas, Rhododendrons, and most of the ericaceous plants herein offered

thrive best in rich, peaty soils and partially shaded situations. A good soil can be made by excavating 2 to 3 feet of the surface, and filling with equal parts of good leaf-mold or other decayed vegetable matter and surface loam, with one-tenth or more of sharp sand. Swamp muck or field sod may be used. Mulching (spent tan, moss, leaves, hay, etc.), is always useful, and is necessary where the ground is very dry. Lime, in large quantities, in any form is very damaging to Rhododendrons, Azaleas, and ericaceous plants in general. As a rule, give the plants a deep soil, with plenty of well-decayed vegetable food and good drainage, and the results will be satisfactory. Always give Rhododendrons a northern exposure where possible, and do not cultivate deep, as ericaceous plants are surface feeders.

AZALEAS

The American Azaleas are among the choicest of all ornamentals, whether exotic or native, and were but rarely seen in cultivation before being disseminated by HIGHLANDS NURSERY. Large masses of "Great Flame-Colored Azalea," calendulacea, when seen in flower, present the most gorgeous effects, the shadings varying from deep crimson to a bright sulphur-yellow, and its complete hardiness is unquestionable. The foliage of A. arborescens is the finest of all the Azaleas, remaining a clear, shiny green throughout the summer, a characteristic not usual with this family. The large, white, sweet-scented flowers appear the last of all the Azaleas, and the numerous pink-tipped stamens protruding give a most beautiful effect. Azalea vaseyi is one of the finest introductions of late years, the flowers appearing before the foliage in April in the greatest profusion, white to deep pink; attains a height of 12 to 15 feet. A. nudiflora (deep pink) and A. viscosa (white) are pretty, dwarfer varieties, very useful in the under shrubbery. The only large and fine stock in the world of American Azaleas is now growing in

The only large and fine stock in the world of American Azaleas is now growing in the HIGHLANDS NURSERY, all heavy plants with balls and full of flower buds, excepting

perhaps some of the smallest sizes.

We Supply Many Rane Nativ	- D14-	NI o	. T :	

This grand new Hemlock, introduced by us, possesses a distinct pyramidal growth, and attains a height of 40 to 50 feet. Its dense, dark foliage and graceful habit are only approached by some of the finer Japanese Hemlocks, which it somewhat resembles. Some fine specimens, 12 to 15 feet high, are now to be seen in the Arnold Arboretum, and are the first plants of this Hemlock ever sent out, being supplied by us to Prof. C. S. Sargent, Director, in 1884.

Evergreen Shrubs

The following (mostly broad-leaved) Shrub Evergreens are of greatest value for massing and for ground covering. All are perfectly hardy, and most of them produce a grand show of flowers. It is needless here to more than call attention to the large stock of Rhododendrons and Kalmia latifolia offered below. All are carefully transplanted and cultivated, and are clean and stocky. I have special methods of growing, gained by long experience, which insures healthy, well-ripened wood and good balls on roots, and the large quantities grown enable me to produce and sell at extraordinarily low prices. They will also be collected to order cheaply in any quantities.

A specialty is made of collecting to order by the carload clumps and large plants of *Rhododendron maximum*, *Kalmia latifolia*, *Leucothoë catesbeei*, and others, which are sure to grow and produce a fine immediate effect. Cost for this service gladly estimated, and correspondence invited, particularly from Landscape Gardeners and Park and Cemetery Superintendents. Special advertisement elsewhere.

Vines, Climbers and Creepers

Many plants here offered re of special merit for ground covering, and where needed in large quantities, will be supplied at very low prices. Ambeiopsis quinquefolia var. engelminni, Lonicera sempervirens, L. halleana, L. japonica, Polygonum cilinode, Celastrus seinlens. Rubus hispidus and Vitus species are particularly recommended. In soils adapted to its growth (peaty or loamy, and preferably moist), Galax aphylla makes a hardy evergreen undershrub covering of lasting beauty, being a rich green in summer and coloring vivid bronze tints in autumn and winter, an effect which must be seen to be appreciated.

AMPELOPSIS engelmanni. This is the clinging form of the well-known Virginia Creeper, and was introduced by us several seasons ago. The leaves are much thinner and smaller than in the ordinary variety, and the whole plant lacks the coarseness that characterizes A quinquefolia and it clings to walls like the ivy. The fall coloring is exceedingly brilliant, and in every way it is vastly superior to the common form, which is not used where the new variety is known and can be had. A fine stock ready for fall delivery. (See prices under this).

Native Ferns

A good collection of hardy native Ferns for park and cemetery planting, including the following varieties:

Adlantum pedatum, Aspidium marginale,

Aspidlum spinulosum. Aspidium acrosticholdes, Dicksonia punctilobula, Onoclea sensibilis,

Osmunda, in 3 vars., Polypodium vulgare, Pteris aquilina.

Most of the above ferns will be collected to order at \$10 per 1,000, excepting the Osmundas, which are very heavy, at \$15 per 1,000. Only strong clumps will be sent. All nursery grown except where marked Col.

Tilium humbaldtii

LILIUM SUPERBUM (Turk's-Cap Lily). No description will do justice to this magnificent American Lily. A clump of them is literally a "blaze of scarlet and gold." For years we have made the growing of this Lily a specialty and have sent out over a hundred thousand bulbs. Our stock this season is very fine, and we are offering it at a low price, for the benefit of large planters and those wishing to catalogue it. Of special use for planting in Rhododendron beds. Special prices: First size, 75 cts. for 10, \$4 per 100, \$30 per 1,000; Second size, 50 cts. for 10, \$2 50 per 100, \$20 per 1,000; Third size, 25 cts. for 10, \$1.50 per 10, \$10 per 1,000.

Cypripedium spectabile. (See page 15.)

Xanthorrhiza apiifolia (Yellow Root) growing at Highlands Nursery.

Undoubtedly the finest American undershrub for planting under trees or along roadways, walks and borders, and particularly where conditions of extreme moisture prevail. Foliage remains good till autumn, when it turns to shades of orange and yellow. Now used by thousands in parks and private grounds. A fine stock, ready for fall and spring sales. See prices, page 10.
